Referral Letter

Date: 2026-08-01

Referred to: Endocrinology Clinic

Dear Colleague,

I am referring this patient for further evaluation of long-standing Type 2 diabetes mellitus with suboptimal glycaemic control on their current regimen. Recent labs show HbA1c trending upward over the past two visits. No known drug allergies. Patient is otherwise stable and ambulatory.

Please advise on further management, including consideration for any suitable clinical trial enrollment.

Kind regards,

Dr. A. Okafor, MD
